

Save \$10,000 Annually Per Field With Fertigation

The annual savings for labor, water, fertilizer, chemicals and equipment can be over \$10,000 per field with a fertigation program.

Labor is the biggest cost so take the man off the sprayer, spreader and mower and put him on preparing the fields, which is a visual value.

Every field has an automatic irrigation system. So add fertigation and have automatic irrigation and automatic fertilization at the same time.

Fertigation. It's the next step for automation.

Target fields that have tournament play, or target damaged areas that need to recover from damage from over play.

Fertigation is a great tool for any sports field manager.
