

Sodium Issues Solved

Mark Bonner is happy with great turfgrass on the Joaquin high school football stadium.

Sodium in the irrigation water was the issue, and Mark was faced with poor turfgrass no matter how much he watered and fertilized.

We installed a L500C and he injected special nutrients to block sodium and build the soil biology

We used a special soil treatment by Medina Ag to treat the sodium and feed the soil and the grass.

The results are dramatic. Healthy turfgrass covers the field that is thick and safe for the players.

Mark is a happy field manager.
